Join us for these "Free" training sessions
in Cleveland and Columbus Ohio

Introduction to Home Automation 9am-12noon

This session will cover the benefits and features of an HAI system.

Security, Lighting, Temperature control and more

You will learn how to plan a customer's project from start to finish.

Installation and Programming 1pm-4pm

Students are taught wiring techniques for Security, Lighting, Fire, Temperature control, whole house audio.

This session will cover how to connect and address a keypad, touch screen and setup and configure HAI light switches and remote internet access.

Students will also learn how to setup the above devices using HAI programming software and program macros (commands) to control home automation.

You will be taught programming options that provide real life examples of how to best utilize the power of an HAI system.

Each attendee is required to bring their laptop computer.

A trial version of HAI programming software will be provided to each attendee.
